PROJECTS

Medical AI Chatbot: Revolutionizing Healthcare	Jan2024 -Present

- The decentralized application that helps people with their health. This chatbot can talk to people and answer their questions about feeling sick and give advice if someone needs to see a doctor. By using the technologies NextJS ,MySQL ,Lang chain(to build NLP pipelines), LLM-A2 Language model.

Netflix Clone |SQL, React**| [GitHub]**	Aug2023 - Dec2023

- I created a responsive landing page that replicates the design and functionality of the popular streaming platform Netflix.
- Built using React.js, this project features carousels showcasing different movie and TV titles When a user clicks on a title card, a modal opens and plays the trailer video for that title.
- While not a full-fledged clone, this project demonstrates my skills in React.js development, API integration, and implementing responsive design principles.

Daily News |Tailwind CSS, JavaScript**| [GitHub]**	Jan2022 – May2022

- This project is a comprehensive news application fetches real-time news articles from the reliable News API. Users can stay up to date with the latest happenings across various. categories, including politics, sports, entertainment, and more.
- The clean and user-friendly interface ensures a seamless browsing experience, enabling users to read headlines and full articles easily.
